PROFESSIONAL SUMMARY

Product Designer with combined design experience spanning since 2017 across graphic design and product/UX design, including 2+ years in dedicated product design roles. Sole designer on Gloroq, a competitive esports platform, delivering the landing page, authentication flow, user dashboard, creator dashboard, and admin panel from wireframe to developer handoff with zero handoff friction. Led 3 full design revisions of BladeRoom, a multi-role booking platform, while also building its frontend. Skilled in user research, wireframing, high-fidelity UI, prototyping, and cross-functional collaboration with developers and founders in fast-moving startup environments.

EXPERIENCE

Product Designer, Gloroq Gaming Platform Aug 2025 to Jun 2026, Remote

Sole designer on a competitive esports platform enabling solo and team tournament registration plus pro-user competition management.

- Owned the complete design process from concept through developer handoff, covering the landing page, authentication flow, user dashboard, creator (pro) dashboard, and admin panel.
- Designed role-based user flows and information architecture supporting two distinct user types: players and pro/creator users, within a single product.
- Delivered developer-ready Figma files with zero handoff friction, enabling smooth V1 implementation and earning direct praise from the development team for file organization and clarity.
- Built and maintained a reusable component library using auto layout and variants, keeping visual and interaction design consistent across every product surface without a formal design system.
- Stayed involved post-handoff in QA, reviewing live builds and flagging UI inconsistencies to the dev team.

Product Designer (MVP), UVS Company Feb 2026 to May 2026, Remote

Multi-role barbering appointment platform connecting clients, independent barbers, and corporate accounts.

- Designed a full MVP spanning 3 distinct user roles, Client, Barber, and Entity, each with a tailored dashboard and flow inside one unified app.
- Solved a role-ambiguity onboarding problem by adding role-selection at signup, routing each user directly to their correct experience.
- Applied progressive disclosure across multi-step forms to reduce cognitive load and improve first-time completion rates.
- Shipped both light and dark mode UI, keeping the interface minimal and accessible across all screens.
- Designed in-app payment tracking and booking management flows, giving barbers clear visibility into their income.

PERSONAL PROJECT

Designer & Frontend Developer, BladeRoom App 2025 to present

Multi-gender barbering and hairstyling booking platform with an AI styling assistant, self-initiated as both a design and development build.

- Iterated the full product design across 3 documented revisions, refining UX through self-critique and new feature discovery.
- Designed a role-based profile system for Clients and Hairstylists, stylist discovery, style exploration, a product marketplace, and an AI styling assistant.
- Added license and certificate verification for hairstylist sign-up to prevent platform misuse while keeping client onboarding frictionless.
- Independently built the frontend from these designs; development is complete and functional.

SKILLS

Design Tools: Figma (Auto Layout, Variants, Dev Mode), FigJam, Adobe Photoshop, Canva, CapCut, Adobe XD

Design Practice: Product Design, UI/UX Design, Interaction Design, Wireframing, High-Fidelity Mockups, Prototyping, Design Systems, Component Libraries

Methods: User Research, Usability Testing, Journey Mapping, Agile, Mobile-First & Responsive Design, Progressive Disclosure, Role-Based UX, Accessibility (WCAG)

Technical & Collaboration: HTML/CSS/JS, Figma Dev Mode & Handoff, Cross-Functional Collaboration, Remote Work, Startup Environments

EDUCATION

B.Sc. Biochemistry, Ambrose Alli University, Ekpoma, 2023
