## PROFESSIONAL SUMMARY

Product Designer for mobile and web, with end-to-end experience across esports, service booking, and study-abroad admissions. Works directly with founders and developers from concept through developer handoff, designing multi-role products where clients, staff, and admins each need their own dashboard and flow. Builds reusable Figma component libraries and delivers organized, developer-ready files. Also designs and builds personal products, including one currently in user testing.

---

## EXPERIENCE

**Product Designer (Freelance), Gloroq.** *Aug 2025- Jun 2026*, **Remote**

Worked directly with the founder and development team on Gloroq (gloroq.com), a live esports tournament platform for gamers, teams, and organizers, owning the design end-to-end.

- Owned design from concept to developer handoff: landing page, authentication, player dashboard, creator dashboard, and admin panel.
- Designed a dual-dashboard model where creators switch into a separate mode with a distinct theme color, so users always know whether they are playing or hosting.
- Designed a color system for creators working long sessions on screen.
- Built a reusable Figma component library (auto layout, variants) and delivered organized handoff files to the dev team.
- Reviewed live builds after handoff and flagged UI inconsistencies to developers.

**Product Designer (Freelance), UVS** *Feb- May 2026*, **Remote**

Worked from the client's PRD to design the MVP of a multi-entity barbering platform (iOS) for clients, independent barbers, and organizations booking barbers for groups.

- Designed three role-specific experiences (Client, Barber, Entity), each with its own onboarding path, dashboard, and flow, chosen at sign-up.
- Designed booking and contract flows, including barber income tracking and entity contract status and analytics.
- Designed a super admin dashboard for user management and account creation.
- Designed a full dark mode across all three roles.

- Used progressive disclosure in multi-step forms to reduce cognitive load.

**Product Designer (Freelance), Deleo Group** *Oct 2026*, **Remote**

Worked from a PRD prepared by LionAbiola Technologies to design the V1/MVP of a mobile platform helping students discover and apply to Canadian schools. In Apple and Google review, launching next week.

- Designed the core student flow: registration, onboarding by field of study, a browse feed filtered to that field, program detail pages, a multi-step application form, and status tracking.
- Designed a 4-stage application status system (Received, Processing, Approved, Rejected), including the rejection flow with preset reasons and an optional note.
- Designed an admin dashboard for reviewing applications, updating status, and manually managing school and program listings, built simple enough for non-technical staff to use.
- Designed CSV, PDF, and Excel export for the applications list.
- Proposed the document-upload gating rule, blocking submission until all required documents for a program are uploaded, drawing on firsthand experience processing study-abroad applications where missing documents caused delays and false hope for students.

**Product Designer (Freelance, Contract), NDA Clients** *Mar - Apr 2026*, **Remote**

- Maintained consistency with the existing design system, component library, and color tokens throughout, creating new interaction components only when the existing system didn't yet cover a need.
- Completed an in-progress admin dashboard for another product designer, delivering 16+ desktop screens and prototyping across admin and mobile.
- Designed mobile-responsive versions of an existing desktop product, including prototyping, as a separate engagement.
- Designed mobile-responsive versions of desktop screens for two landing page projects.

---

## PERSONAL PROJECT

**Personal Project: BladeRoom** *2025 - Present*

*Designer & Frontend Developer*

AI-powered hairstyle discovery and booking mobile app for clients and hairstylists.

- Designed the full product for two user types: clients discover styles and book stylists, and approved hairstylists get an upgraded interface with schedule and booking management.
- Grounded the hybrid home-service and in-studio booking model in conversations with a working barber, who described the financial limits of not having his own shop, and direct observation of

barbershop customers frustrated by long queues and inconsistent access to their preferred barber.

- Designed and prototyped in Figma an AI face-scan and virtual TryOn feature that recommends styles before booking.
- Designed stylist discovery, booking, wallet, and product ordering flows.
- Ran ongoing beta testing with real users, using their feedback to improve the flow, logic and fix bugs
- Built the frontend from these designs [React Native/Expo].

## SKILLS

**Design Tools:** Figma (Auto Layout, Variants, Dev Mode), FigJam, Adobe Photoshop.

**Practice:** Product Design, UI/UX Design, Interaction Design, Wireframing, High-Fidelity Mockups, Prototyping, Component Libraries

**Methods:** User Research, Usability Testing, Mobile-First & Responsive Design, Progressive Disclosure, Role-Based UX.

**Technical & Collaboration:** HTML/CSS/JS, Figma Dev Mode & Handoff, Cross-Functional Collaboration.

## EDUCATION

**B.Sc. Biochemistry,** Ambrose Alli University, Ekpoma, 2023
